The software is used as an integral part of the Microsoft's Operating system and hence you will get to see Notepad in almost every other Windows computers.. TextEdit is the default text editor in macOS, and it's just as barebones as the default text editor in Windows, Notepad.. Hence, Mac users look for other alternatives This is the reason that now this application has surpassed the old Notepad in the terms of usages as it lets the users accomplish various kinds of the other advanced tasks which were earlier impossible to be done by the Notepad.. This is the reason that why this application is being used by almost all Windows operating system users, and you can also download this application from the sourceforge.. If you are also using the old Notepad software but are looking for some advanced features in the same software then we would suggest you switch to the new Notepad++ software.
